PROFESSIONAL SUMMARY

Data Science and AI undergraduate at NTU (GPA 4.34/5.00) with e-commerce and ads experience. Built **Hermes**, an AI data agent used by every department at an Amazon seller, and automated work across 2,000+ campaigns and 800+ SKUs. Strong in SQL, Python and dashboards, and used to turning what non-technical teams need into data tools they use every day.

SKILLS

Data and Analytics
SQL, Python (Pandas), Databricks AI/BI, Power BI, Excel

Business and Ads Data
Amazon SP-API and Ads API, PPC and ACoS metrics

AI and Automation
Hermes, OpenClaw, Claude Code, MCP, n8n, Telegram and Google Sheets APIs

Infrastructure and Engineering
Docker, Linux VPS, Google Cloud, Vercel, GitHub Actions, TypeScript, Next.js, Supabase, Prisma, Drizzle

EXPERIENCE

AI and Automation Specialist **May 2026 - Aug 2026**

LaLaGreen (Amazon e-commerce), Internship · Singapore (Hybrid)

- No central view of sales and ads data; interviewed each department and built **Hermes**, an AI agent on the SP-API and Ads API that answers data questions, tracks performance and suggests actions, without opening Seller Central.
- Gave Hermes the ability to raise budgets and upload bulk campaigns, and pitched it to non-technical and non-English-speaking staff, making it the **first central data system, used by 10-15 staff across every department**.
- Shift staff topped up PPC budgets by hand every 30 minutes; built an n8n pipeline that checks each campaign's ACoS against its limit and **fully automates top-ups across 2,000+ campaigns**.
- Built price-dip alerts across **800+ SKUs** so the team spots drops early and reprices without tripping Amazon's alerts.
- Deployed Hermes and **10 n8n pipelines** on Docker, used daily by the 10-person marketing team.

Platoon Sergeant **Jan 2023 - Nov 2024**

Singapore Armed Forces

- Led a platoon of 20 operating drones and surveillance systems.
- Replaced paper stores logging with a secure Telegram bot synced to Google Sheets, giving command a live view; **adopted company-wide for all drone and camera equipment**. Ran for 6 months under military security protocols, and new unit bots still build on this code.

PROJECTS

Fall In · BrainHack CODE_EXP **May 2026**

Next.js, Supabase, Claude, Telegram API

- Built an NS admin platform whose AI assistant turns scattered instructions into groups, timelines and packing lists, with Telegram broadcasts and reminders to cut repeated queries; **finalist, Certificate of Merit, top 28 of 160 teams**.

Hack and Hire · SystemEarth Track **Oct 2026**

Python, Neon PostgreSQL, PostGIS, PyQt5

- Checking farms against EU deforestation rules meant querying ~20 satellite layers; stored them in Neon as one 32-bit value per pixel, three ways (evidence pages, stencils, PostGIS), **36× smaller** with **100% decision fidelity**.
- Built a PyQt desktop app that checks drawn or loaded farm plots in one batched query (1,000 plots in 3.5 s); **top 1 of 13 teams, SystemEarth track**.

EDUCATION

Bachelor's in Data Science and AI **Expected Aug 2029**
Nanyang Technological University · GPA 4.34 / 5.00 · Relevant coursework: Introduction to Databases (SQL)

Cambridge A Levels · Jurong Pioneer Junior College **Nov 2022**

CERTIFICATIONS AND AWARDS

Databricks AI/BI for Data Analyst
Databricks · Jan 2026

Microsoft Excel Specialization
Microsoft · May 2025

Machine Learning Specialization
DeepLearning.AI · May 2025

Python for Data Science and AI
IBM · May 2025

EAGLES Award
Ministry of Education · 2020
